

THE GENIE ECOSYSTEM

Multi-Token Utility Project

Taking advantage of the hype behind Give-Aways, the big new trend of Prediction Markets with the added concept of P2P, permissionless and a Launchpad with unique features not found elsewhere

Everyone is still searching for that elusive 100x or 1000x. But with the creation of Bitcoin now almost 2 decades old, institutional money already having come in and hundreds of new tokens being launched every day, the chances of finding that one token are about the same as that of winning the lottery. On the other hand, leverage trading, which does promise huge gains, rarely delivers (and in fact usually ends up in losses) is nothing more than a gamble with possibly even worse odds than a casino due to the manipulation and stop-loss and liquidation hunting which is prevalent in the market.

So, do you give up, or do you try to find that one elusive project? And how much do you invest if you think you have found it? Do you go all in and take big risk or start small? A 0.1 Sol investment at 100x is just 10 SOL. But once it has achieved 100x, it's not likely to do another 100x again. So, that's all you get after searching for days, if not weeks for the right opportunity.

This project is a little different. It has the utility and sustainability required to succeed. And it also has 4 initial tokens, linked to each other, yet independent – each with its own unique utility, all being launched one after the other, so you can reinvest part of any profits in the next token at launch price. And there will be more, because the 4th token to be launched is that of a launchpad with some highly unique features. And you will also have the chance to invest in any of those projects, at launch. And they will all be supported by the same community, which will have made a name for itself, if the earlier tokens were successful. That reduces your risk.

I must include a disclaimer here though. There are no guarantees. Nothing in this document constitutes financial advice. And you could lose your money if you invest in the project or any of the tokens described here.

The first token to be launched will be \$NOSHIT. It will be the rocket fuel for the whole project. It will be launched on pump.fun, with creator fees. The name is appropriate for this stage, as it is going to be linked with tokens that are to be launched later, and have real utility.

The second token will be \$GIVEAWAY. It will have a 1% buy and 5% sell tax, and be launched on Raydium or Jupiter, with the liquidity raised from the creator fees from \$NOSHIT. The fees generated

from this will be distributed for giveaways, senate members, buy backs and burns, marketing and administrative costs.

The third token will be \$PREDICTOR. This will be the token directly linked with a prediction market. It will have a 0.3% buy and 3.6% sell tax, and will also be launched on Raydium or Jupiter. It will be launched prior to, or at the latest, at the same time as the license from Malta has been approved and the prediction market becomes operational. However, the likelihood is that it will be earlier, and the fees generated from the token will be used for the licensing and other set up costs. There will also be a presale, with the soft and hard cap to be determined, but again, due to the high cost of licensing, it may not be possible to raise all the required funds in this way. There will be a burn mechanism and amounts set aside for senate members, marketing and administrative costs.

The fourth token will be \$GENIE. This will be a standard token with no tax, and will either initially or later, be listed on leading CEXes. However, it will still be deflationary, with fees earned from the ecosystem being used to burn tokens. Amounts will also be set aside for senate members, marketing and administrative costs. There will also be a fund to finance the independent audits of tokens which have been vetted and approved, and which are being launched by third parties, as well the injection of initial liquidity into the tokens, to give them an advantage and ensure they are more sustainable. Moneys paid from this fund will be in the form of loans and will be fully repayable from revenues generated from transaction taxes and any fee revenue earned by the creator of the tokens in the prediction market (from the markets specific to the tokens only).

PHASE 0 – PRE-LAUNCH

Github will be under a single repository (Genie Ecosystem) and all members of the existing X communities will be contacted to notify them of the updates to the project and get them to follow all of the relevant accounts on X.

A telegram channel will be created, with full details of the project being provided in a pinned message, in English.

Telegram moderators / marketing specialists will be sought in various different languages (Turkish, Russian, Arabic, Farsi, Chinese, European languages – whatever languages you think are going to be the most effective). Telegram channels will be set up separately in all relevant languages. Pay will be on a revenue share basis only. Parameters for payment can be based on special referral codes assigned to these language specific growth officers, which are advertised on their telegram and stated as a tag (note) when buying tokens.

There will be shill/promotion on X with the tags, under 3 groups initially: #Next100x (general), #GiveawayCrypto (giveaways), #Hiring (hiring), with other tags that may also be added.

Articles will be published on quora, reddit and medium on the state of the finance markets, the manipulation in crypto and how to still benefit and possibly earn 100-1000x in today's conditions. These articles cannot contain any specific advertising, but will be worded in such a way to encourage interaction, with more specific promotion being through that interaction.

PHASE 1 - \$NOSHIT

- Token will be launched on pump.fun with creator fees.
- Will be traded only in SOL and USDC pairs.
- Creator fees will be used initially only for the financing required to launch \$GIVEAWAY.
- Thereafter, any fees will be placed in the Treasury to be distributed in the manner set out below.
- All rewards for marketing (including the sprint for Senate positions) will start to be calculated from \$NOSHIT. Details of rewards and Senate criteria are set out below.
- \$NOSHIT holders will receive an airdrop of \$GIVEAWAY at a rate of 1.05:1 token held. This will be based on the number of tokens held at a cut-off time (to be advertised) before the launch of \$GIVEAWAY. These will be vested for 25 weeks and released at the rate of 4% a week. The equivalent 4% of \$NOSHIT must be staked by transferring these to the Treasury wallet, where they will be held for 25 weeks.
- \$NOSHIT holders will receive an airdrop of \$PREDICTOR at a rate of 75% of 1.036:1 token held. This will be based on the number of tokens held at a cut-off time (to be advertised) before the launch of \$PREDICTOR. These will be vested for 40 weeks and released at the rate of 2.5% a week. The equivalent 2.5% of \$NOSHIT must be staked by transferring these to the Treasury wallet, where they will be held for 40 weeks. Any tokens already staked for the \$GIVEAWAY airdrop allocation can be used also for the \$PREDICTOR airdrop allocation, by extending the staking period for a further 40 weeks.
- \$NOSHIT holders will receive an airdrop of \$GENIE at a rate of 50% of 1:1 token held. This will be based on the number of tokens held at a cut-off time (to be advertised) before the launch of \$GENIE. These will be vested for 100 weeks and released at the rate of 1% a week. The equivalent 1% of \$NOSHIT must be staked by transferring these to the Treasury wallet, where they will be held for 100 weeks. Any tokens already staked for the \$GIVEAWAY airdrop allocation and/or the \$PREDICTOR airdrop allocation can be used also for the \$GENIE airdrop allocation, by extending the staking period for a further 100 weeks.

PHASE 2 - \$GIVEAWAY

- Token will be launched on Raydium or Jupiter, with a 1% buy and 5% sell tax.

- There will be no presale.
- 40% of all tax fees will be distributed in giveaways as follows: 2 giveaways a week – Monday and Thursday. 6 each as rewards and 3 each to be determined by the Senate. 1st place: 9%; 2nd – 7%, 3rd – 6; 4th, 5th, 6th – 4% each. Senate determined giveaways – 2% each. Giveaways may be paid out in SOL, USDC or native token, as decided from time to time by the Senate.
- The remainder of the fees will be placed in the Treasury to be distributed in the manner set out below.
- \$GIVEAWAY holders will receive an airdrop of \$PREDICTOR at a rate of 25% of 1.036:1 token held. This will be based on the number of tokens held at a cut-off time (to be advertised) before the launch of \$PREDICTOR. These will be vested for 40 weeks and released at the rate of 2.5% a week. The equivalent 2.5% of \$GIVEAWAY must be staked by transferring these to the Treasury wallet, where they will be held for 40 weeks.
- \$GIVEAWAY holders will receive an airdrop of \$GENIE at a rate of 25% of 1:1 token held. This will be based on the number of tokens held at a cut-off time (to be advertised) before the launch of \$GENIE. These will be vested for 100 weeks and released at the rate of 1% a week. The equivalent 1% of \$GIVEAWAY must be staked by transferring these to the Treasury wallet, where they will be held for 100 weeks. Any tokens already staked for the \$PREDICTOR airdrop allocation can be used also for the \$GENIE airdrop allocation, by extending the staking period for a further 100 weeks.

PHASE 3 - \$PREDICTOR

- Token will be launched on Raydium or Jupiter, with a 0.3% buy and 3.6% sell tax.
- There will be a Presale (vested; terms and soft cap / hard cap levels to be determined).
- All fees will initially be set aside for the costs associated with Malta licensing and the building of the prediction platform.
- All tax fees thereafter will be placed in the Treasury to be distributed in the manner set out below.
- \$PREDICTOR holders will receive an airdrop of \$GENIE at a rate of 25% of 1:1 token held. This will be based on the number of tokens held at a cut-off time (to be advertised) before the launch of \$GENIE. These will be vested for 100 weeks and released at the rate of 1% a week. The equivalent 1% of \$PREDICTOR must be staked by transferring these to the Treasury wallet, where they will be held for 100 weeks.

PHASE 4 - \$GENIE

- Token will be launched on Raydium or Jupiter as a standard token (no transaction taxes).
- There will be no presale.
- Fees will be generated from the share of the tax fees paid to Genie from those generated by other tokens launched on the Genie Launchpad. As a standard, a maximum of 50% of the taxes generated from such tokens will be paid to Genie. A Senate decision can be taken to reduce this amount in specific cases (including the waiving of all fees where a token is part of a multi-token project and is to be listed on at least one CEX platform and where the other token(s) in the project are tax tokens).
- All fees generated will initially be set aside to meet the costs of listing on a minimum of one leading CEX platform. Thereafter, the Senate may decide to set aside a maximum of 50% of the fees generated to meet the costs of listing on other CEX platforms.
- All other fees which have been generated will be placed in the Treasury to be distributed in the manner set out below.

PHASE 5 – LAUNCHPAD

- Genie Launchpad will be a manual launchpad, launching tokens primarily on the Solana network. However, other networks may also be utilised following Senate approval.
- All 3rd party tokens (that is tokens other than those listed above) are subject to Senate vetting and approval.
- All tokens must show a viable plan for generating revenue (even if only through transaction taxes) and be deflationary (have a burn mechanism).
- The Senate may, as part of its decision to approve a token, stipulate that it must go through an independent audit. Other tokens may also choose to do so, if they wish. The costs for such audit may be borrowed from the Genie Treasury, subject to agreeing a plan for repayment.
- Liquidity loans up to a maximum of 10 SOL or equivalent may be obtained from the Genie Treasury, subject to agreeing a plan for repayment and Senate approval.
- All tokens will automatically be listed on the prediction platform, under a daily volume and price/market cap reached, for the first 7 days after launch.
- The Genie community will actively promote all tokens.
- A maximum of 50% (or lower subject to Senate decision) of the revenue generated by trading the token will be paid to Genie. Where loans have been obtained from the Treasury for audits, liquidity or for any other purpose, 100% of all revenue generated by trading the token + 100% of the creator's share of fees in the prediction markets for the token will be paid to Genie until the loan has been repaid in full, together with interest.
- Interest on the loan will be charged at 1% per month, and will start to be accrued immediately. Thus, any loans repaid within 30 days will be subject to 1% interest, amounts repaid between 31-

60 days will be subject to 2% interest, etc. Payments will be collected automatically from fees, as set out above.

- There will be a maximum of 1 new token launched every day, on working days only (Monday-Friday, except other internationally recognised holidays). This is to ensure that the market is not saturated and the community is able to fully focus on each token.

THE PREDICTION MARKET

- The prediction market will be Malta licensed and owned by a Malta registered entity. All fees will be paid to that entity, which will in turn pay Genie revenue share in the form of a commission.
- It will be a fully P2P platform where market creators will have their own sub-ids (e.g. [predictor.com/creatorname](#)), on which their markets are listed, and they will be able to promote their own markets using that specific link.
- While market creation is subject to Senate approval, approval can only be withheld for legal and ethical reasons. (Examples of what may be deemed to be ethical and what may be deemed to be unethical: “will there be an outbreak of war between country X and country Y” or “will the government in country X be overthrown” is deemed to be ethical; “how many people will be killed in the war” or “will the leader of country X be assassinated/killed” is deemed to be unethical). In addition to this, the parameters and criteria for all markets must be clear (for instance, if the market is related to the price a certain token will reach, then what platform the reference price is to be taken from must also be stated).
- Should the creator of a market require liquidity to facilitate the operation of that market, this can be obtained for a fee, from the Genie Treasury, subject to Senate approval.
- Minimum fees for markets are as follows: 1% to Malta entity, 2% to \$PREDICTOR, 1% to Genie Treasury (if liquidity has been provided), 0.5% to creator – total 3.5-4.5%. Creator may charge a maximum of 3.5%. Where the market is related to a token launched on Genie, \$PREDICTOR fees will be only 1% and creator may choose to waive his/her fees.
- Fees generated from the prediction markets will be distributed in the manner set out below.
- The Malta entity reserves the right to increase the fees it retains if the revenue generated by it is not sufficient to keep the entity profitable at a minimal level.

FEE DISTRIBUTION

- All fees (tax fees, launchpad fees, loan interest) generated from the 4 tokens listed above will be distributed as follows, and will be set aside starting from the launch of the first token:
 - Genie Treasury – 20% (separate wallet)
 - Marketing and admin budget – 25% (separate wallet), of which 10% will be set aside as referral fees (referral fees will be paid to all individual registered on the telegram channels, who have

obtained a referral code, and where any buyer of any of the 4 tokens listed above has included a tag (note) on the transaction, stating the said referral code)

- Senate share – 20%
- Token burns – 35% (5% \$NOSHIT, 5% \$GIVEAWAY, 5% PREDICTOR, 20% \$GENIE)
- All fees generated from the prediction markets (1-2% + liquidity) will be distributed as follows: 10% \$PREDICTOR burns, 25% marketing and admin budget for prediction markets only, 25% Genie Treasury, 40% Senate Share.

SENATE MEMBERSHIP

The governance Senate which decides on various matters concerning the ecosystem, including the approval of new tokens, will be limited to an initial membership of 100 individuals, each holding 1 share and 1 vote in the Senate.

Up to 30 of these will be appointed as growth officers, as marketing specialists / telegram moderators, with there being at least one member in each of the languages available as a telegram channel on the ecosystem. These members may be appointed, or may acquire membership by winning a sprint race designed to raise revenue or strengthen the community.

The project owner will automatically be a member of the Senate.

The remaining 69 places can be purchased for a fee, with the price of the first 9 places being 1 SOL, the next 10 places being 3 SOL, and the price increasing by 3 SOL for every 10 places sold thereafter (maximum 18 SOL). Senate members receive a 15% share of all revenues distributed from the project, as well as 40% of the revenues distributed to \$PREDICTOR from the prediction markets.

All investors acquiring Senate positions in this way will be given the option to acquire the equivalent amount of any of the 4 (or a combination thereof) tokens listed above, at the valid price at the time. Should they have invested prior to the launch of the particular token they wish to acquire, they may acquire this at launch price, without paying any buying tax, and a discount equal to the selling tax charged for that token. However, the acquisition will be subject to vesting at the rates announced for the airdrops of each token, as set out above.

All decisions (apart from decisions concerning the structure, authorities and responsibilities of the Senate and the distribution of fees) will be taken by a majority of the votes cast on a Senate specific WhatsApp group channel. All matters to be decided will be announced on that channel a minimum of 24 hours in advance. Decisions concerning the structure, authorities and responsibilities of the Senat and distribution of fees require a minimum 2/3 majority of all members/shares.

Once the number of members of the Senate has reached 100 AND all 4 of the tokens listed above have been launched, any individuals creating a new token on the launchpad will be awarded one new Senate position free-of-charge, once the said token has been trading for 60 days, with a minimum of 7 full consecutive days where the market cap was continuously above 500,000 USD equivalent, and where the current market price is or reaches 500,000 USD equivalent on or after the 60th day. Senate membership will begin at the end of the quarterly period (March, June, September, December) during which it has been earned.

Where Senate memberships are extended in this way, all previous Senate members will also have the right to acquire additional Senate positions (shares) as follows: up to 1.5% of the total – free of charge; up to 2% of the current total – 30% of the full price of Senate membership (18 SOL); up to 2.5% of the current total – 60% of the full price of Senate membership (18 SOL); up to 3% of the current total – 100% of the full price of Senate membership (18 SOL). Votes will then be cast as 1 share = 1 vote.

Senate positions are transferrable by way of auction sale through the platform, for which Genie will charge a 3% fee (proceeds go to Senate), or privately. Private sales are subject to approval by the remaining members of the Senate.
